GE23131-Programming Using C-2024

Flag question

frequency of each digit in the given string.

Input Format

The first line contains a string, *num* which is the given number.

Constraints

$1 \le len(num) \le 1000$

All the elements of num are made of English alphabets and digits.

Output Format

Print ten space-separated integers in a single line denoting the frequency of each digit from 0 to 9.

Sample Input 0

a11472o5t6

Sample Output 0

0210111100

Explanation 0

In the given string:

- 1 occurs two times.
- 2, 4, 5, 6 and 7 occur one time each.

The remaining digits 0, 3, 8 and 9 don't occur at all.

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
        #include<string.h>
int main(){
                char num[1000];
int freq[10]={0};
                int req[i0]={0;
scanf("%s",num);
for(int i=0;num[i]|='\0';i++){
    if(num[i]>='0' && num[i]<='9'){
        freq[num[i]-'0']++;
}</pre>
 8
11
                 for(int i=0;i<10;i++){
    printf("%d ",freq[i]);
12
13
14
                printf("\n");
return 0;
15
16
17
       }
```

	Input	xpected	Got
1	a11472o5t6	2 1 0 1 1 1 1 0	0 2 1
1	lw4n88j12n1	21010002	0 2 1
1	1v888861256338ar@ekk	11201205	9 1 1 1

	Input	Expected			
~	a11472o5t6	0 2 1 0 1 1 1 1 0 0	0 2 1		
~	lw4n88j12n1	0 2 1 0 1 0 0 0 2 0	0 2 1

Question 2
Correct
Marked out of 1,00
F Flag question

it. While Monk was walking, he noticed that all trees with vowels on it are not in good state. He decided to take care of them. So, he asked you to tell him the count of such trees in the garden.

Note: The following letters are vowels: 'A', 'E', 'I', 'O', 'U', 'a',

Today, Monk went for a walk in a garden. There are many

trees in the garden and each tree has an English alphabet on

Note: The following letters are vowels: 'A', 'E', 'I', 'O', 'U', 'a', 'e', 'I', 'o' and 'u'.

Input

The first line consists of an integer $\ensuremath{\mathcal{T}}$ denoting the number of test cases.

Each test case consists of only one string, each character of string denoting the alphabet (may be lowercase or uppercase) on a tree in the garden.

Output:

For each test case, print the count in a new line.

Constraints: 1 ≤ T ≤ 10

```
1 ≤ length of string ≤ 10<sup>5</sup>
```

SAMPLE INPUT

nBBZLaosnm

JHklsnZtTL

SAMPLE OUTPUT

1

.

Explanation

In test case 1, a and o are the only vowels. So, count=2

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
             #includesstdio.h>
#includesstring.h>
int main(){

Given a sentence, s, print each word of the sentence in a new

Question 3 Correct Marked out of 1.00

P Flag question

Input Format

Constraints

$1 \le len(s) \le 1000$

Output Format

Print each word of the sentence in a new line.

The first and only line contains a sentence, s.

Sample Input 0

This is C

Sample Output 0

This

is

Explanation 0

In the given string, there are three words ["This", "is", "C"]. We have to print each of these words in a new line.

```
Answer: (penalty regime: 0 %)
     1 #include<stdio.h>
2 #include<string.h>
3 int main(){
                                                                                                                                                                                           cmain(){
    char sen[1000];
    scanf("%[^\n]",sen);
    char "word=strtok(sen," ");
    while(word=strtok(sen," ");
    with the sen in 
                                                                 4
                                                            6
                                                            8
                                                  10
                                                                                                                                                                                                                    return 0;
                                             11
12 }
```

	Input	Expected	Got

Question 4 Correct Marked out of 1.00

Input Format

You are given two strings, \boldsymbol{a} and \boldsymbol{b} , separated by a new line. Each string will consist of lower case Latin characters ('a'-'z').

Output Format

In the first line print two space-separated integers, representing the length of ${\bf a}$ and ${\bf b}$ respectively. In the second line print the string produced by concatenating ${\bf a}$ and ${\bf b}$ (${\bf a}$ + ${\bf b}$). In the third line print two strings separated by a space, ${\bf a}^*$

and **b'**. **a'** and **b'** are the same as **a** and **b**, respectively, except that their first characters are swapped.

Sample Input

ahed

ef

Sample Output

4 2 abcdef

ebcd af

Explanation

a = "abcd" b = "ef"

|a| = 4

|b| = 2a + b = "abcdef"

a' = "ebcd"

b' = "af"

Answer: (penalty regime: 0 %)

#include<stdio.h>
#include<string.h>
int main(){
 char a[1000],b[1000];
 scanf("%s",a);
 scanf("%s",b);
 printf("%lu %lu\n",strlen((a)),strlen((b)
 printf("%s%s\n",a,b);
 char temp=a[0];
 a[0]=b[0];
 b[0]=temp;
 printf("%s %s\n",a,b);
 return 0;

	Input	Expected	Got	
/	abcd ef	4 2 abcdef ebcd af	4 2 abcdef ebcd af	~

Passed all tests!
